regulation of neuron projection development regulation of Rho protein signal transduction regulation of Ras protein signal transduction regulation of small GTPase mediated signal transduction regulation of cell morphogenesis actomyosin structure organization regulation of supramolecular fiber organization regulation of membrane potential positive regulation of neuron differentiation.			
positive regulation of neuron projection development modulation of chemical synaptic transmission synapse organization positive regulation of nervous system development cell–substrate adhesion positive regulation of neurogenesis synapse maturation			
positive regulation of cell projection organization platelet activation dendrite development dendrite morphogenesis cell-matrix adhesion actin filament organization			
gliogenesise establishment or maintenance of cell polarity Ras protein signal transduction diacylglycerol metabolic process positive regulation of cell development striated muscle cell differentiation			
actin filament bundle organization regulation of protein complex disassembly actin filament bundle assembly sensory perception of sound hemostasis regulation of synapse structure or activity regulation of hippo signaling			
regulation of long term synaptic depression blood coagulation blood coagulation dephosphorylation dephosphorylation negative regulation of supramolecular fiber organization positive regulation of dendrite development regulation of cytoskeleton organization muscle cell differentiation			
regulation of cell-substrate adhesion regulation of transmembrane transport regulation of actin filament organization sensory perception of light stimulus signal release dendrite extension			
regulation of actin cytoskeleton organization coagulation long term synaptic depression extracellular matrix organization positive regulation of dendrite extension myelination in peripheral nervous systems poripheral peripheral per			
peripheral nervous system axon ensheathment extracellular structure organization regulation of dendrite development regulation of cell morphogenesis involved in differentiation negative regulation of Ras protein signal transduction regulation of synapse organization regulation of cellular component size			
regulation of protein polymerization cerebral cortex development cerebral cortex development muscle system process calcium ion transport cell–substrate junction assembly negative regulation of small GTPase mediated signal transduction			
negative regulation of intrinsic apoptotic signaling pathway regulation of ion transmembrane transport locomotory behavior regulation of synaptic plasticity neuron projection extension negative regulation of cellular component movement visual perception			
chemical synaptic transmission, postsynaptic regulation of actin filament–based process establishment of cell polarity multicellular organismal signaling regulation of cell–matrix adhesion regulation of dendrite extension			
maintenance of protein location in cell- myofibril assembly- divalent inorganic cation transport- protein polymerization- regulation of protein depolymerization- Schwann cell development-			
negative regulation of locomotion synaptic transmission, glutamatergic regulation of postsynaptic membrane potential divalent metal ion transport sensory perception of mechanical stimulus dendritic spine development platelet aggregation			
positive regulation of cell–matrix adhesion developmental growth involved in morphogenesis actin cytoskeleton reorganization actin cytoskeleton reorganization positive regulation of supramolecular fiber organization filopodium assembly negative regulation of cell motility.			
negative regulation of autophagy regulation of metal ion transports axonogenesis axonogenesis neuron death negative regulation of protein complex assembly negative regulation of Rho protein signal transduction axon developments			
neuron projection guidance regulation of GTPase activity axon guidance regulation of cell shape positive regulation of GTPase activity neuron recognition			
regulation of neurotransmitter levels negative regulation of cell projection organization negative regulation of nervous system development learning or memory negative regulation of neuron projection development glial cell differentiation learning			
lamellipodium organization protein depolymerization neurotransmitter transport regulation of filopodium assembly calcium ion transmembrane transport cell junction organization			
potassium ion transport positive regulation of synaptic transmission neuronal ion channel clustering regulation of dendritic spine development cellular potassium ion transport potassium ion transmembrane transport positive regulation of protein complex disassembly			
glutamate receptor signaling pathway neurotransmitter secretion signal release from synapse cardiac conduction sodium ion transmembrane transport negative regulation of neurogenesis			
dendritic spine morphogenesis negative regulation of neuron differentiation muscle contraction muscle contraction regulation of protein complex assembly second-messenger-mediated signaling dendritic spine organization negative regulation of cell development			
regulation of cell development cognition cognition cell junction assembly membrane depolarization during action potential striated muscle contraction endocytic recycling regulation of neurotransmitter secretions			
action potential actin polymerization or depolymerization actin polymerization or depolymerization regulation of vesicle-mediated transport excitatory postsynaptic potential muscle cell development ensheathment of neurons			
axon ensheathment presynaptic process involved in chemical synaptic transmission neuron projection organization myelination striated muscle cell development regulation of plasma membrane bounded cell projection assembly actin filament-based movement			
regulation of neurotransmitter transport cell–cell signaling by wnt cellular component assembly involved in morphogenesis positive regulation of cell–substrate adhesion regulation of cell projection assembly Wnt signaling pathway			
protein dephosphorylation actin filament depolymerization actin filament depolymerization actin filament depolymerization cardiac muscle cell contraction synaptic vesicle localization positive regulation of cellular component biogenesis regulation of actin filament depolymerization vesicle localization			
sodium ion transport negative regulation of muscle adaptation glial cell development peptidyl–tyrosine dephosphorylation synaptic vesicle transport establishment of synaptic vesicle localization vesicle–mediated transport in synapse			
regulation of autophagy positive regulation of neurological system process calcium ion transport into cytosol regulation of lamellipodium organization regulation of cation transmembrane transport Schwann cell differentiation			
myotube differentiation synapse assembly synapse assembly calcium–mediated signaling regulation of synaptic transmission, glutamatergic neural precursor cell proliferation heart process			
negative regulation of cytoskeleton organization contractile actin filament bundle assembly stress fiber assembly heart contraction synaptic vesicle cycle memory positive regulation of neurotransmitter secretion synaptic vesicle priming			
synaptic vesicle priming interleukin–15–mediated signaling pathway cellular response to interleukin–15 negative regulation of phosphatase activity cardiac muscle cell action potential regulation of heart contraction establishment of vesicle localization			
establishment of vesicle localization epithelial cell migration epithelial cell migration telencephalon development telencephalon developments regulation of dendrite morphogenesis positive regulation of macroautophagy lamellipodium assembly positive regulation of cyclase activity.			
positive regulation of lyase activity microtubule bundle formation microtubule bundle formation regulation of actin filament bundle assembly positive regulation of autophagy negative regulation of protein complex disassembly cytosolic calcium ion transport			
cilium assembly glycoprotein biosynthetic process negative regulation of protein depolymerization stem cell proliferation regulation of actin filament length neuron migration vascular endothelial growth factor receptor signaling pathway			
vascular endothelial growth factor receptor signaling pathway positive regulation of cell adhesion regulation of axonogenesis ameboidal-type cell migration response to mechanical stimulus platelet-derived growth factor receptor signaling pathway central nervous system neuron axonogenesis			
epithelium migration regulation of calcium ion–dependent exocytosis cilium organization cilium organization cellular carbohydrate metabolic process negative regulation of cell migration activation of adenylate cyclase activity response to muscle inactivity.			
response to muscle inactivity synaptic vesicle exocytosis cell-cell junction organization membrane depolarization regulation of G-protein coupled receptor protein signaling pathway cerebral cortex radial glia guided migration central nervous system projection neuron axonogenesis telencephalon glial cell migration			
membrane depolarization during cardiac muscle cell action potential regulation of dephosphorylation exocytic process response to interleukin–15 regulation of neuronal synaptic plasticity axonal fasciculation			
neuron projection fasciculation positive regulation of neurotransmitter transport lamellipodium morphogenesis telencephalon cell migration activation of protein kinase activity regulation of actin polymerization or depolymerization positive regulation of filopodium assembly			
nippo signaling regulation of synaptic vesicle transport oocyte differentiation aminoglycan metabolic process inositol phosphate metabolic process regulation of cell size			
calcium ion regulated exocytosis macromolecular complex disassembly regulation of sodium ion transport proteoglycan metabolic process peptidyl-threonine modification adherens junction organization.			
protein localization to plasma membrane homotypic cell-cell adhesion tissue migration tissue migration peptidyl-threonine phosphorylation eye development protein localization to cell periphery positive regulation of epithelial cell migration			
positive regulation of cellular component movements regulation of developmental growths plasma membrane organizations regulation of transporter activity peptidyl-serine modifications peptidyl-serine phosphorylations regulation of epithelial cell migrations			
regulation of epithelial cell migration proteoglycan biosynthetic process anion transmembrane transport positive regulation of cell migration cellular response to peptide hormone stimulus positive regulation of cell motility regulation of transmembrane transporter activity			
protein autophosphorylation cell growth cytoskeletal anchoring at plasma membrane phospholipid metabolic process glycerophospholipid metabolic process positive regulation of locomotion regulation of homeostatic process			
neuromuscular process developmental cell growth cellular response to peptide regulation of ion transmembrane transporter activity camera–type eye development positive regulation of cell morphogenesis involved in differentiation organic hydroxy compound metabolic process			
negative regulation of phosphorylation regulation of endocytosis response to purine—containing compound amino acid transport regulation of vascular permeability regulation of anatomical structure size endothelial cell migration			
regulation of actomyosin structure organization regulation of platelet aggregation regulation of platelet aggregation positive regulation of endothelial cell migration positive regulation of excitatory postsynaptic potential peptidyl-tyrosine modification axoneme assembly			GeneRatio
positive regulation of developmental growth glomerulus development ERBB signaling pathway glycosaminoglycan biosynthetic process integrin–mediated signaling pathway angiogenesis muscle organ development			● 0.03 ● 0.04 p.adjust
organic anion transport aminoglycan biosynthetic process cellular response to insulin stimulus ammonium ion metabolic process striated muscle tissue development peptidyl-tyrosine phosphorylation muscle tissue development			0.04 0.03 0.02
regulation of hormone levels negative regulation of cell morphogenesis involved in differentiation amino acid transmembrane transport adult behavior positive regulation of myelination			0.01
radulation at ian hamaactacie			
regulation of ion homeostasis regulation of cell growth negative regulation of protein phosphorylation response to peptide hormone renal system development membrane raft organization glycerolipid metabolic process			
regulation of cell growths negative regulation of protein phosphorylation response to peptide hormone renal system development membrane raft organization glycerolipid metabolic process negative regulation of organelle organization multicellular organismal homeostasis positive regulation of lipid metabolic process cellular response to retinoic acid tube morphogenesis negative regulation of actin filament depolymerization			
regulation of cell growth- negative regulation of protein phosphorylation response to peptide hormone renal system development membrane raft organization glycerolipid metabolic process negative regulation of organelle organization multicellular organismal homeostasis positive regulation of lipid metabolic process cellular response to retinoic acid tube morphogenesis negative regulation of actin filament depolymerization heparan sulfate proteoglycan metabolic process response to insulin regulation of protein binding bone development glomerular basement membrane development SA node cell to atrial cardiac muscle cell communication substrate adhesion-dependent cell spreading			
regulation of cell growth- negative regulation of protein phosphorylation- response to peptide hormone renal system development- membrane raft organization- glycerolipid metabolic process negative regulation of organelle organization- multicellular organismal homeostasis positive regulation of lipid metabolic process cellular response to retinoic acid tube morphogenesis negative regulation of actin filament depolymerization- heparan sulfate proteoglycan metabolic process response to insulin- regulation of protein binding bone development glomerular basement membrane development SA node cell to atrial cardiac muscle cell communication substrate adhesion—dependent cell spreading epithelial tube morphogenesis gland morphogenesis regulation of synapse assembly skeletal system development regulation of myelination- photoreceptor cell maintenance			
regulation of cell growth- negative regulation of protein phosphorylation- response to peptide hormone- renal system development- membrane raft organization- glycerolipid metabolic process negative regulation of organelle organization- multicellular organismal homeostasis positive regulation of lipid metabolic process cellular response to retinoic acid tube morphogenesis negative regulation of actin filament depolymerization- heparan sulfate proteoglycan metabolic process response to insulin- regulation of protein binding bone development glomerular basement membrane development glomerular basement membrane development SA node cell to atrial cardiac muscle cell communication- substrate adhesion—dependent cell spreading epithelial tube morphogenesis gland morphogenesis regulation of synapse assembly skeletal system development regulation of myelination- photoreceptor cell maintenance activation of GTPase activity cardiac septum development adult locomotory behavior response to peptide regulation of cellular response to growth factor stimulus peptidyl—tyrosine autophosphorylation cellular response to alcohol			
regulation of cell growth negative regulation of protein phosphorylation response to peptide hormone renal system development membrane raft organization glycerolipid metabolic process negative regulation of organelle organization multicellular organismal homeostasis positive regulation of lipid metabolic process cellular response to retinoic acid tube morphogenesis negative regulation of actin filament depolymerization heparan sulfate proteoglycan metabolic process response to insulin regulation of protein binding bone development glomerular basement membrane development glomerular basement membrane development son development son development son development glomerular basement membrane development substrate adhesion – dependent cell spreading epithelial tube morphogenesis regulation of synapse assembly skeletal system development regulation of myelination photoreceptor cell maintenance activation of GTPase activity. cardiac septum development adult locomotory behavior response to peptide regulation of cellular response to growth factor stimulus peptidyl-tyrosine autophosphorylation cellular response to alcohol regulation of neuron death glycosaminoglycan metabolic process response to AMP regulation of stress fiber assembly protein localization to synapse regulation of endothelial cell migration			
regulation of cell growth negative regulation of protein phosphorylation response to peptide hormone real system development membrane raft organization glycerolipid metabolic process negative regulation of organelle organization multicellular organismal homeostasis positive regulation of lipid metabolic process cellular response to retinoic acid tube morphogenesis negative regulation of actin filament depolymerization heparan sulfate proteoglycan metabolic process response to insulin regulation of protein binding bone development glomerular basement membrane development glomerular basement membrane development sA node cell to atrial cardiac muscle cell communication substrate adhesion—dependent cell spreading epithelial tube morphogenesis gland morphogenesis regulation of synapse assembly skeletal system development regulation of myelination photoreceptor cell maintenance activation of GTPase activity cardiac septum development adult locomotory behavior response to peptide regulation of cellular response to growth factor stimulus peptidyl—tyrosine autophosphorylation cellular response to alcohol regulation of neotone death glycosaminoglycan metabolic process response to alcohol regulation of neotone death glycosaminoglycan metabolic process response regulation of stress fiber assembly adherens junction assembly protein localization to synapse regulation of endothelial cell migration fibroblast migration retina development in camera—type eye nephrion development actin filament capping modulation of excitatory postsynaptic potential.			
regulation of cell growth negative regulation of protein phosphorylation response to peptide hormone reanal system development membrane raft organization glycerolipid metabolic process negative regulation of organelle organization multicellular organismal homeostasis positive regulation of lipid metabolic process cellular response to retinoic acid tube morphogenesis: negative regulation of actin filament depolymerization heparan sulfate proteoglycan metabolic process response to insulin regulation of protein binding bone development should be protein a protein binding bone development glomerular basement membrane development glomerular basement membrane development should be protein substrate adhesion—dependent cell spreading epithelial tube morphogenesis regulation of synapse assembly skeletal system development regulation of synapse assembly skeletal system development regulation of myelination photoreceptor cell maintenance activation of GTPase activity cardiac septum development adult locomotory behavior response to peptide regulation of cellular response to general glycosaminoglycan metabolic process peptide glycosaminoglycan metabolic process regulation of neuron death glycosaminoglycan metabolic process regulation of stress fiber assembly adherens junction assembly protein localization to synapse regulation of exitensi migration retina development in camera—type eye nephron development fibroblast migration modulation of excitatory postsynaptic potential vesicle docking regulation of sodium ion transmembrane transport regulation of insulin secretion positive regulation of axonogenesis neuron apportic process phospholipid biosynthetic process phospholipid biosynthetic process phospholipid biosynthetic process phospholipid biosynthetic process urrogenital system development in camera—type eye phospholipid biosynthetic process phospholipid biosynthetic process
